

ENVIRONMENTAL POLICY

Swedish Oat Fiber AB uses a unique process to fractionate the oat kernel into three fractions; SWEOAT Brans high in beta glucans, SWEOAT Flours high in protein and SWEOAT Oils high in different polar lipids.

We are at all times ensuring that we use our resources in the most responsible and sustainable manner.

Being active in the environmental work and reducing the environmental impact of the business is a vital part of the everyday business. We focus persistently on improvements in energy use and production efficiency, to minimize emissions and environmental impact by using all fractions of the raw materials. We plan for optimal logistical solutions, so that our goods are distributed in the best way.

Updates and information of environmental ideas and legislation are ensured by a contracted consultant, providing us with the latest news.

We commit to the following environmental policies:

- ✓ We comply with Swedish and European laws and regulations in every way, having strict procedures and goals in our environmental work. Among other things, these are defined in our environmental permit from the authorities (also regulating and restricting our emissions to air and water).
- ✓ We sort our waste into combustible, metal, wood, electronics, hazardous waste and other waste.
- ✓ We commit to reduce our energy use when possible, in the form of heat, hot water and electricity. We use only environmentally certified energy (in Sweden called Grön El) and we are proud of our climate diploma.
- ✓ We do consider environmental impact when choosing suppliers and we try actively to impact and steer our suppliers to decrease their environmental impact.
- ✓ We purchase the adequate chemicals with the least environmental impact and we keep track of every chemical in our books. The aim is to decrease the chemicals used and we recycle them to very high degree.
- ✓ We do always consider the best environmental ways of planning logistics, whether it is transporting goods or planning our own business travels.
